T.E.(E&TC)

ANTENNA & WAVE PROPAGATION
(2012 Pattern)(Semester-II) (End Sem.)

Time : 2½ Hours]

[Max. Marks : 70

Instructions to the candidates:

- 1) Answer any one Question out of Q1 & Q2, Q3 & Q4, Q5 & Q6, Q7 & Q8.
- 2) Neat diagrams must be drawn wherever necessary.
- 3) Figures to the right side indicate full marks.
- 4) Assume suitable data if necessary.

Q1) a) What is Poynting vector? What is its significance? Derive an expression for Poynting vector? [8]

b) Derive vector potential A for an magnetic current source J . [6]

c) Calculate the skip distance for flat earth with MUF of 10MHz. If wave is reflected from a height of 300 Km where maximum value of refractive index (n) is 0.9. [6]

OR

Q2) a) Explain antenna radiation mechanism in detail. [6]

b) What is polarization of wave? Explain the polarization of three types of wave with the help of relevant diagram? [6]

c) A lossless resonant $\lambda/2$ dipole antenna with input impedance of 73Ω is to be connected to a transmission line whose characteristic impedance is 50Ω . Assuming that the pattern of the antenna is given approximately by $U = \cos^2\theta$. Find the overall maximum gain of this antenna. [8]

Q3) a) Find the following terms for small Dipole antenna: [18]

i) Specify the current

ii) Vector magnetic potential

iii) Far field components of Electric & Magnetic fields

iv) Radiation density, radiation intensity

v) Radiated power, radiation resistance

vi) Directivity

vii) Draw the radiation pattern.

OR

P.T.O.

- Q4)** a) Calculate the radiation resistance of a double turn and an eight turn small circular loop when radius of loop is $\lambda/10$ and the medium is free space. Calculate its efficiency if loss resistance is 25Ω . [8]
- b) Derive mathematical expression for power density and radiation intensity of half wave dipole antenna and draw radiation pattern of half wave dipole antenna in E and H plane. [10]

- Q5)** a) Write a short notes on [8]
- Pattern Multiplication
 - Binomial Array
- b) For an array of four isotropic sources along Z-axis separated by a distance $\lambda/2$ and progressive phase shift $\alpha=0$ find [8]
- Nulls direction
 - Direction of maxima
 - Direction side lobes
 - Half power Beam width
 - Draw neat radiation pattern.

OR

- Q6)** a) Explain planar array. State its advantages and applications. [6]
- b) Design a broad side Dolph-Tschebysheff array of five elements with half wavelength spacing between elements and with major to minor lobe ratio to be 19dB. Find the excitation coefficients & array factor. [5]
- c) Give the comparison of broadside and End fire antenna array. [5]
- Q7)** a) What is Microstrip patch antenna? Give structure details, radiation pattern, specification and application of such antenna. [5]
- b) What is meant by Rhombic Antenna? How it is constructed? Explain how unidirectional pattern is obtained in properly terminated Rhombic Antenna. [5]
- c) Write a short notes on following antennas with respect to structural details, radiation pattern, features and applications. [6]
- Hertz antenna
 - Whip antenna

OR

Q8) a) Write a short notes on the following antennas. **[12]**

- i) Lens Antenna
- ii) Resonant Antenna
- iii) Super-turnstile Antenna

b) A paraboloidal reflector antenna with diameter 20m is designed to operate at frequency of 6 GHz and illumination efficiency of 0.54. Calculate the antenna gain in decibels. **[4]**
